

SKY CANNON is a perfect and powerful uplighting floodlight and is a brilliant solution for overheating glass problems risen usually with vertical light output.

Similar up-lighting projectors require use of a special ceramic glass, particularly expensive and extremely brittle Die cast booster mounted on the body works as a spacer between the glass and the light source, allowing a considerable heat reduction and the use of normal safety glass for up-lighting purpose.

A wide range of filters can be used with coloured light output, suitable for very high façades.

SKY CANNON is also used in sport facilities as it gives an excellent glare control.
